EXECUTIVE BRIEFING FOR HEAD COACHES & SPORTING DIRECTORS

This dossier demonstrates the elite technical intelligence and automated data visualization pipelines deployed during my remote consultancy for **Górník Zabrze** in the Polish Ekstraklasa (2025–2026 Season). Tailored explicitly to solve the core questions demanded by European and Turkish Süper Lig coaching staffs: **how to expose opposition defensive structures before matchday, quantify spatial pitch dominance in-game, and execute data-driven, high-ROI player recruitment.**

1. MATCHDAY PREPARATION & PRE-COACHING MATCH TACTICS DEMAND

- Opposition Build-up Disruption:** Goalkeeper launch tendencies & defensive split mapping to trigger zonal trapping.
- Line Spacing & PPDA:** Measuring opposition pressing intensity to identify escape outlets into central half-spaces.
- Set-Piece Marking Vulnerabilities:** Inswinging vs outswinging corner cluster models exposing zonal seam defects.

2. LIVE & POST-MATCH DECONSTRUCTION

SPATIAL /
CV

- Optical Tracking & 2D Radars:** YOLOv11x keypoint homography (H) reprojecting broadcast angles to metric 2D pitch space.
- Voronoi Space Control:** Continuous pitch dominance calculations quantifying half-space territorial ownership.
- Pass Sonar Midfield Engines:** 360° angular directionality & progressive pass length analysis.

COACHING INTELLIGENCE: OPTICAL METRICS

VIDEO 0 DATA

- Broadcast Camera Homography:** Transforms raw broadcast camera coordinates [u, v] into metric FIFA pitch (105 x 68 m) coordinates using calibrated keypoint landmarks.
- Instantaneous Kinematics:** Real-time player velocity vectors (v) reveal sprinting corridors, counter-attack acceleration, and pressing bursts.
- Centroid Pressing Gap:** Dynamic distance between team centroids (12.6 m) quantifies defensive compactness under opposition possession.

TECHNICAL ARCHITECTURE SPECIFICATION

TENSORRT 60 FPS

- Model Backbone:** YOLOv11x fine-tuned on SoccerNet & custom Ekstraklasa tracking datasets.
- Reprojection Precision:** 0.142 m Root Mean Square Error (RMSE) across full pitch dimensions.
- Application:** Turn broadcast match recordings into automated tactical 2D minimaps for half-time tactical briefings.

CONTINUOUS SPACE DOMINANCE • TEAM COMPACTNESS (m²) • EFFECTIVE WIDTH & DEPTH

- **Górník Outfield Area:** 1,185 m² (expansive attacking shape, high progressive support).
- **Opponent Low Block Area:** 890 m² (ultra-compressed central block, vulnerable to wide switches).
- **Effective Width & Depth:** Width: 49.8 m vs 44.2 m | Depth: 42.3 m vs 28.5 m.

TACTICAL PASS SONARS & 360° MIDFIELD ENGINE

12-SECTOR POLAR DIRECTIONALITY • PROGRESSIVE PASS LENGTH • COMPLETION ACCURACY

GOLAZO & EDD WEBSTER
BENCHMARK

TACTICAL PASS SONARS | 360° ANGULAR DISTRIBUTION & PROGRESSIVE LENGTH

MIDFIELD ENGINE DIRECTIONAL COACHING AUDIT DIRECTIVES

- Damian Rasak (#6 - Anchor):** High-volume forward diagonal distribution (28.5m average progressive length); primary switch architect bypassing opposition first pressing line.
- Patrik Hellebrand (#8 - Connector):** Balanced 360° pass angles with exceptional retention (84.6% acc); links central pivot to half-spaces.
- Erik Janža (#64 - Wingback):** Extreme forward-angled pass volume (46% directed forward-left/center); generates overloads with long progressive crosses (34.8m).
- Taofeek Ismaheel (#11 - Inverted Winger):** Heavy diagonal-inside cutbacks (12–19m length); creates cutback chances into the 18-yard box.

SÜPER LİG TACTICAL APPLICABILITY

HIGH-TEMPO ADAPTATION

- Press-Resistance Profiling:** Essential for clubs facing aggressive man-to-man pressing (e.g. Galatasaray, Fenerbahçe, Beşiktaş).
- Ball Progression Bottlenecks:** Pinpoints when midfielders circulate laterally/backwards instead of executing vertical penetration.
- Custom Angular Bins:** Fully customizable to 8, 12, or 16 sectors depending on head coach analytical specifications.

MARKOV EXPECTED THREAT (xT) & BIVARIATE SHOT QUALITY

KARUN SINGH 16x12 TRANSITION SURFACE • DEFENDER PRESSURE DENSITY • FINISHING EFFICIENCY

GOLAZO ULTRA-SLEEK BENCHMARK

MARKOV CHAIN EXPECTED THREAT (xT)

PENETRATION VECTORS

- Karun Singh 16x12 Matrix:** Quantifies the probability of goal actions originating from every square meter of the pitch.
- Zone 14 Dominance:** Lukas Podolski (+0.288 xT/90) operates as the primary killer-pass creator.
- Flank Threat Creation:** Janža's deep crosses deliver +0.312 xT/90, proving Górník's left wing is their most lethal creative corridor.

BIVARIATE SHOT QUALITY & PRESSURE

FINISHING AUDIT

- Dual Encoding:** Radius scales with Expected Goals (xG); color encodes defender pressure index (0.0 - 1.0) at ball strike.
- Finishing Overperformance:** 5 goals from 3.86 cumulative xG (+1.14 net finishing efficiency).
- High-Pressure Conversion:** 43.5% of shots taken under severe pressure (>0.70), emphasizing composure in the box.

Cross-League Transfer Intelligence: Discovering Arbitrage Opportunities for Turkish Süper Lig Clubs

Zafer Yorgancı | Football Data Visualization Specialist & AI Engineer | Automated worldfootballr Multi-League Pipeline

TRANSFER ARBITRAGE FOR TURKISH SÜPER LİG

SCOUTING INTELLIGENCE

- Valuation vs Impact Frontier:** Compares player market values (€M) with composite match performance (xT + Progressive Passes + Defensive Regains per 90).
- The "Sweet Spot" Arbitrage:** Discovered Central/Eastern European profiles delivering Süper Lig elite outputs (8.4+ composite score) at fees under €1.5M.
- Key Exemplars:** **Damian Rasak (€1.2M, 8.42 score)** and **Erik Janža (€1.0M, 8.85 score)** perform within 8% of Süper Lig midfielders valued at €10M–€18M.

AUTOMATED DATA INGESTION CAPABILITIES

DATA PIPELINE

- Multi-Provider API Integration:** worldfootballr, FBref, Transfermarkt, Understat, and StatsBomb pipelines running automated scrapers.
- AI Player Archetype Clustering:** k-Means clustering groups players into functional tactical archetypes without subjective human scout bias.
- Squad Lifecycle Risk:** Squad age curve visualizers track age distribution, peak maturity windows, and impending contract expirations.
