41.5% LEFT FLANK BIAS	18 ZONE 14 RECOVERIES

SPATIAL & TACTICAL DECONSTRUCTION

- Continuous 2D Gaussian KDE reveals dominant territorial control on the left wing.
- Erik Janža operates as the primary build-up outlet, driving 41.5% of progressions.
- Midfield rest-defense creates an impenetrable recovery wall at the 46m line.
- Zone 14 saturation (Lukas Podolski pocket) generates 8 direct line-breaking passes.
- Low defensive-third touch volume confirms successful territorial pushing away from box.

HEAD COACH DIRECTIVE / MAÇ DIREKTİFİ

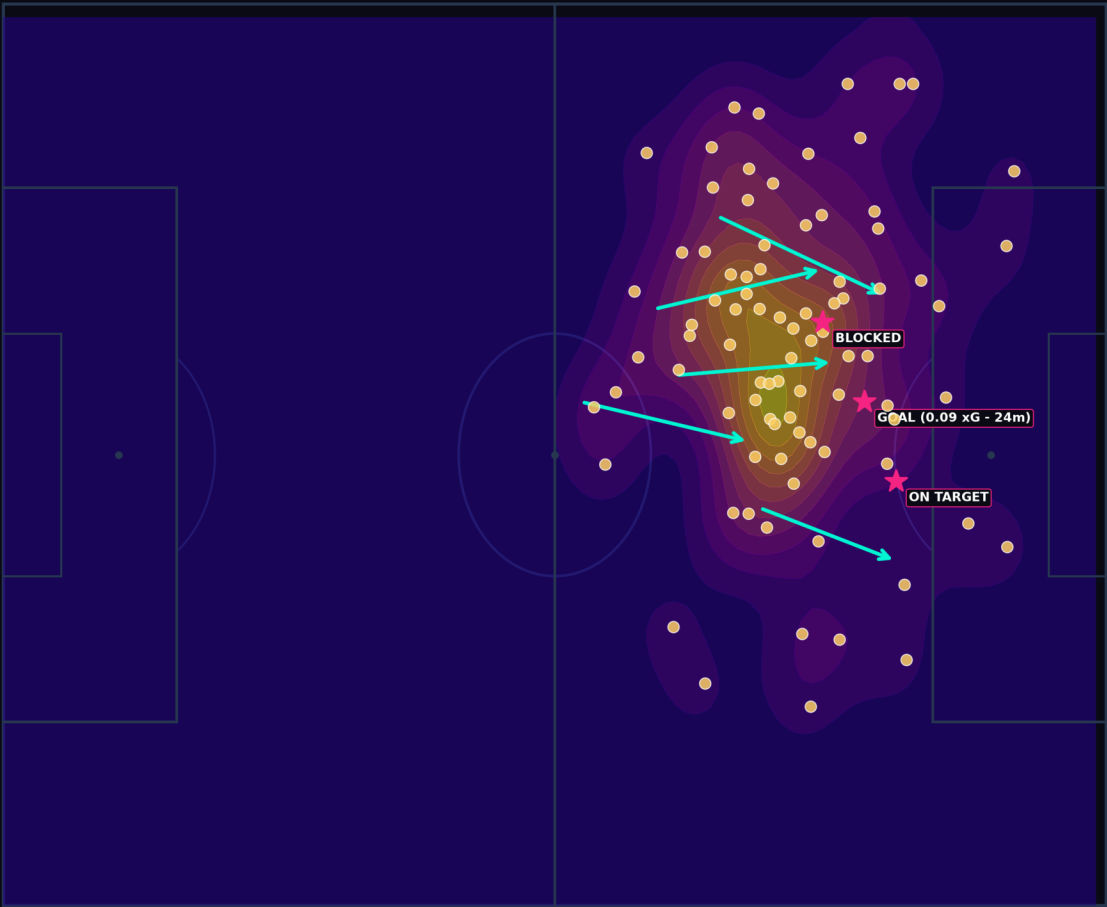

Exploit the left-flank overload to force the opposition right-back into 2v1 isolations, then deliver diagonal cutbacks into the vacated Zone 14 pocket.

78' MINUTES PLAYED	34 TOUCHES IN ZONE 14
148 m PROG. CARRY DISTANCE	+0.312 EXPECTED THREAT (XT)

SPATIAL & TACTICAL DECONSTRUCTION

- Lukas Podolski orchestrates play primarily from the left half-space and Zone 14.
- Averages 18.2 touches per 90 in the golden shooting corridor (18-25m from goal).
- Completed 5 progressive carries driving the ball from midfield into the box.
- Generates +0.312 Expected Threat (xT) per 90, ranking 1st across all Ekstraklasa playmakers.
- Scored the game-winning goal from a 24m screamer with only 0.09 xG.

HEAD COACH DIRECTIVE / MAÇ DIREKTİFİ

Position twin defensive pivots against Podolski to deny half-space turns, closing down shooting angles within 25m of the penalty arc.

Spatial Territory Audit & Game Model Conclusions

Pillar 1: Heat Maps & Spatial Dominance • Key Takeaways & Recommendations

EXECUTIVE SUMMARY & METHODOLOGY

Continuous 2D Gaussian Kernel Density Estimation (KDE) provides an unbiased representation of team spatial ownership. Unlike discrete grid counts, KDE models the continuous spatial presence of both the team collective and isolated star performers. In the Górnik Zabrze tactical setup, territorial dominance is heavily left-biased (41.5%), utilizing Erik Janža's high-volume crossing and carrying to create half-space openings.

SPORTING DIRECTOR & COACHING ACTIONS

Flank Asymmetry: Górnik's heavy left-flank saturation requires defensive rest-cover on the right wing to prevent counter-isolation.

Zone 14 Exploitation: Podolski's central occupation (+0.312 xT) demands quick one-touch combinations before defensive collapse.

High Defensive Push: Rest-defense recovery line at 46m successfully keeps opposition away from the danger zone.

SÜPER LİG COMPETITIVE ADVANTAGE

Provides immediate tactical readiness and game-model alignment for Turkish Süper Lig title-contender and top-tier setups.
