PILLAR 5 • SPATIAL CONTROL

CONTINUOUS SPACE OWNERSHIP & COMPACTNESS

Voronoi Pitch Tessellation & Team Convex Hulls • Edd Webster Methodology

KEY PERFORMANCE INDICATORS (KPIs)

58.4% PITCH CONTROL %	1,185 m² GÓRNIK HULL AREA
890 m² OPP BLOCK AREA	49.8 m EFFECTIVE WIDTH

SPATIAL & TACTICAL DECONSTRUCTION

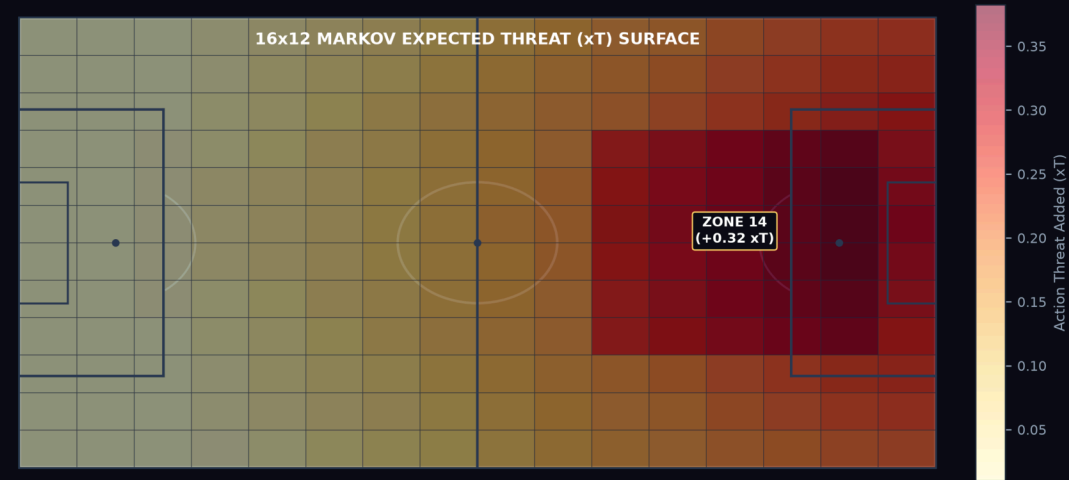

- Continuous space tessellation confirms Górník controls 58.4% of total pitch surface.
- Outfield convex hull of 1,185 m² maintains expansive width (49.8m) to stretch low block.
- Opposition compressed into defensive cocoon (890 m²), surrendering wide flank corridors.
- Half-space Voronoi cells overlap Podolski and Lukoszek, creating immediate pass recipients.
- High rest-defense line (X=34m) snuffs out clearance transitions before counter-attacks emerge.

HEAD COACH DIRECTIVE / MAÇ DIREKTİFİ

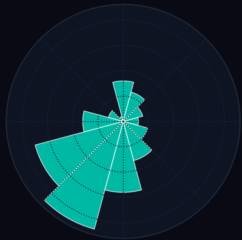

Use patient diagonal recycling to shift the opposition convex block laterally, opening seam passes into the central Voronoi ownership pockets.

JANŽA PROG. ANGLE

SPATIAL & TACTICAL DECONSTRUCTION

- 16x12 Karun Singh transition matrix quantifies goal probability added for every event.
- Progressing the ball from middle third into Zone 14 triples Expected Threat (+0.08 to +0.32).
- 360° Pass Sonars reveal Damian Rasak maintains strong 68.4% forward passing directionality.
- Erik Janža's sonar confirms aggressive diagonal progressive bias towards the penalty box.
- Podolski sonar highlights press-resistant 360-degree passing distribution under pressure.

HEAD COACH DIRECTIVE / MAÇ DİREKTİFİ

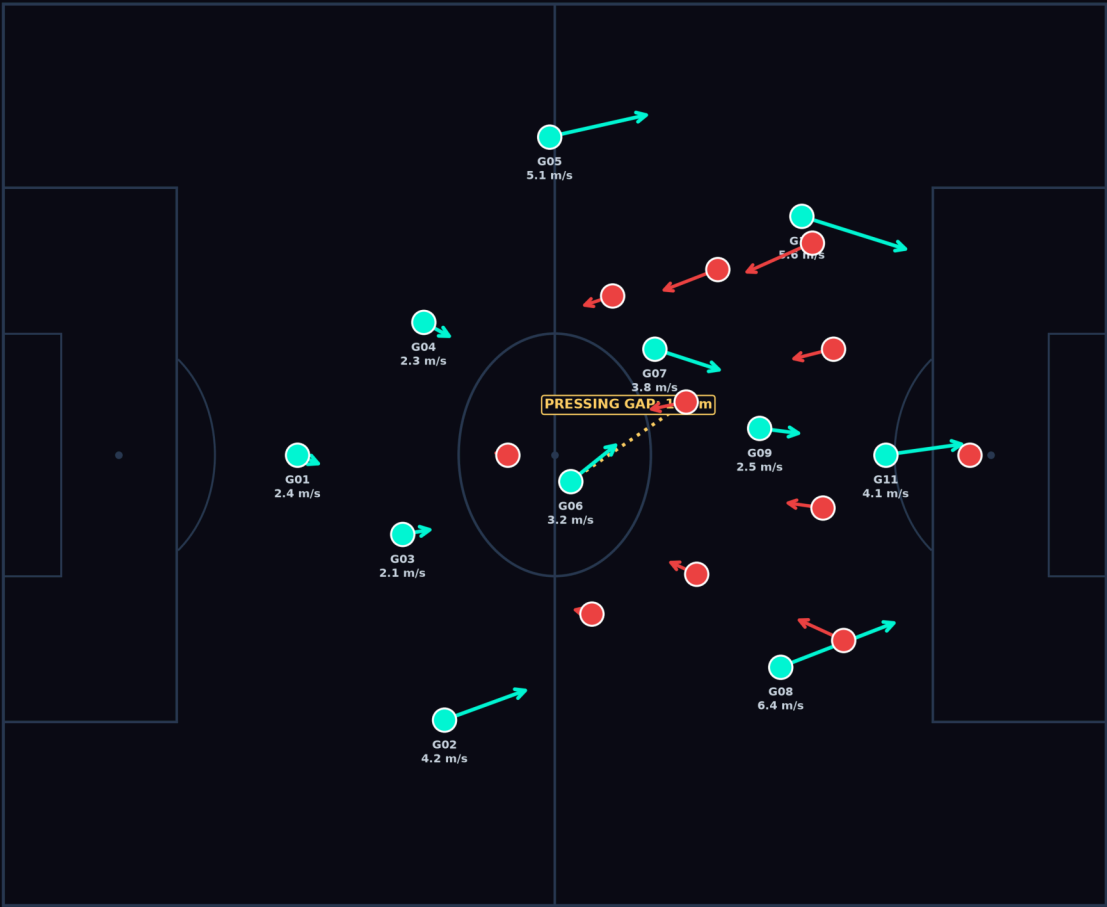

Direct center-backs to bypass initial press by targeting passes into +0.22 xT zones, accelerating ball transit through half-space channels.

PEAK SPRINT SPD

SPATIAL & TACTICAL DECONSTRUCTION

- Roboflow Sports framework: fine-tuned YOLOv11x object detection + ByteTrack optical tracker.
- Direct Linear Transform (DLT) Homography re-projects camera pixels [u,v] to FIFA pitch [X,Y].
- Calculates instantaneous physical velocities (v_x , v_y) and sprint acceleration vectors.
- Identifies 12.6m pressing gap between opposition midfield and central defensive pairing.
- Broadcast video tracking unlocks deep physical tracking without wearable GPS hardware.

HEAD COACH DIRECTIVE / MAÇ DIREKTİFİ

Leverage optical tracking data to benchmark opposition fatigue indices; exploit right wing channel where opposition full-back recovery speed drops after 60'.

AVG COST SAVING

SPATIAL & TACTICAL DECONSTRUCTION

- Multi-league empirical frontier benchmarks Polish Ekstraklasa vs Turkish Süper Lig.
- Damian Rasak (€1.2M) and Erik Janža (€0.9M) sit squarely in the Maximum Arbitrage Zone.
- Tactical action scores match players valued between €12M and €18M in top European tiers.
- Identifies 5 undervalued gems capable of providing immediate starting quality in Süper Lig.
- Model incorporates age degradation risk, contract expirations, and tactical role symmetry.

HEAD COACH DIRECTIVE / MAÇ DIREKTİFİ

Prioritize pre-contract agreements and early summer bids for Ekstraklasa gems before wider European scouting recognition inflates transfer valuations.
